Church & Dwight Work Items Detail

The following list is a sampling of specific activities that I completed at Church & Dwight.

Least Cost Sourcing Project

Explanation: "Least cost sourcing" is the automated selection of the SAP plant in the SD order by lowest total transaction cost. Cost components include manufacturing, transfer and cartage costs, amongst others.

- Facilitated the requirements gathering and definition of multiple requirements (sub-projects) in the least cost sourcing area.
- Assisted in the prioritization of the various user requirements
- Held workshops with key business users to design the first phase expansion of the custom least-cost sourcing bolt-on
- Designed interface to new function module to support expanded group sourcing of single or multiple orders for use by forecasting, reporting and EDI order creation.
- Designed ALV reporting facility to support user requirements under the new implementation (order, delivery least cost sourcing plus flexible 'what-if' analysis support).
- Documented requirements and specifications for use by development team members
- Supported development effort of migration of code to a global function module

Route Determination transportation zone migration

- Collect requirements for a more granular definition of route-determination through zip-code instead of state.
- Provided alternatives and benefits analysis for various SAP solutions
- Lead workshops & designed configuration changes and bolt-on tables for new route determination using 3-digit zip code information.
- Defined migration-plan and -activities for implementing the new configuration
